

Design and build an Employees Management Application

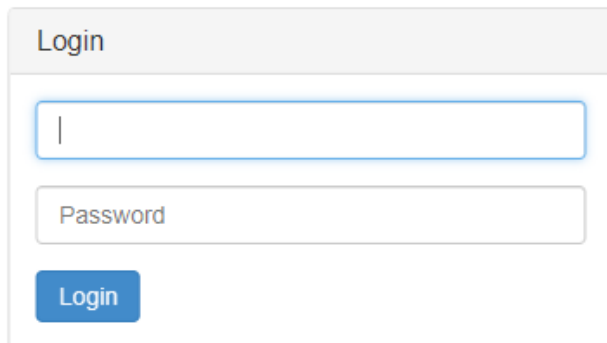

LOGIN PAGE

A login form with a light gray header labeled "Login". Below the header are two input fields: the first is labeled "Login" and the second is labeled "Password". At the bottom of the form is a blue button labeled "Login".

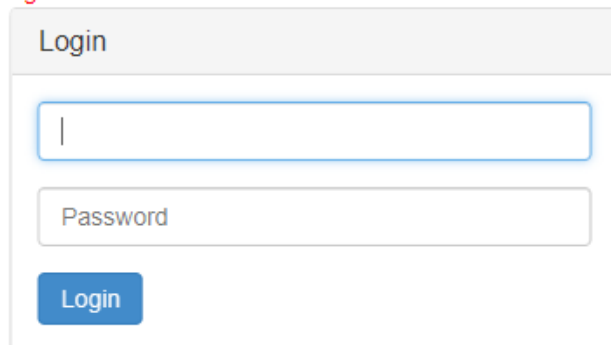

ERROR CASES THAT YOU HAVE TO MANAGE

You must enter values in both fields

The login form with the "Login" header. The "Login" input field is highlighted with a blue border, indicating it is the source of the error. The "Password" field and the "Login" button are visible below it.

Connection failed! Verify your login/password and try again.

The login form with the "Login" header. The "Login" input field is highlighted with a blue border. The "Password" field and the "Login" button are visible below it.

EMPLOYEES LIST PAGE

List of Employees

Sél	NAME	FIRST NAME	HOME PHONE	MOBILE PHONE	WORK PHONE	ADDRESS	POSTAL CODE	CITY	EMAIL
<input type="radio"/>	Jones	Indiana	0145362787	0645362718	0611563477	10 rue des Aventuriers	92270	Bois-colombes	ijones@gmail.com
<input type="radio"/>	Bourne	Jason	0187665987	0623334256	0654778654	65 rue Agent Secret Perdu	92700	Colombes	jbourne@yahoo.fr
<input type="radio"/>	Stark	Arya	0187611987	0783334256	0658878654	6 rue Sans-Nom	75016	Paris	astark@nord.com
<input type="radio"/>	Lanister	Cersei	0187384987	0622494256	0674178654	5 bvd des Reines	21000	Dijon	clanister@mail.co.uk

[Delete](#) [Details](#) [Add](#)

- 1) A click on **Delete** will remove the selected employee from the database and will reload the updated list of employees
- 2) A selection of one employee and a click on **Details** will send the user to the Employee details page
- 3) A click on **Add** will redirect the user to an empty Employee details page
- 4) If you delete all the employees the following message is shown in red:

The company has no employee!

EMPLOYEE DETAILS PAGE

Details of employee : Cersei Lanister

Nom	<input type="text" value="Lanister"/>
Prénom	<input type="text" value="Cersei"/>
Tél dom	<input type="text" value="0187384987"/>
Tél mob	<input type="text" value="0622494256"/>
Tél pro	<input type="text" value="0674178654"/>
Adresse	<input type="text" value="5 bvd des Reines"/>
Code postal	<input type="text" value="21000"/>
Ville	<input type="text" value="Dijon"/>
Adresse e-mail	<input type="text" value="clanister@mail.co.uk"/>
<input type="button" value="Save"/> <input type="button" value="Cancel"/>	

- 1) A click on **Save** will update the information about the current employee and will redirect to the list page
- 2) A click on **Cancel** will redirect to the list page without updating information about the current employee

GENERAL INSTRUCTIONS

1. Session management :
 - There are 2 categories of users :
 - Users with admin rights => login : admin password : admin
 - Regular employees => login : empl & password : empl
 - Users logged in as employees cannot delete, modify or add
 - Users with admin rights can do any action
 - Manage the user's session : the "login" action opens a standard Web session
 - On the upper right of each page (except 2 pages...) you'll show :
 - "Hello <user> ! Your session is active"
 - An icon ☺ that allows the user to logout (leave the session)
 - Create a "Goodbye" page
2. Architecture & code structure roadmap :
 - Loose coupling
 - Separation of responsibilities
 - MVC compliant (at least for V1 & V2)
 - Unique servlet
 - Entry point = servlet
 - Variables : Declaration => global / Initialization => local
 - Elegant and efficient management of exceptions
3. Documentation :
 - Javadoc style
 - As much useful comments as possible in your code
4. Database:
 - Name : **JEEPRJ**
 - User: **jee**
 - Password: **jee**

WHAT IS EXPECTED ?

- 1) A readme.txt file with:
 - A link to your remote *repositories*
 - Specific eventual instructions to launch your application : I don't ~~want~~ have to guess how your application works.
- 2) The source code of your application (to be shared on a distant code repository). 3 versions are expected:
 - a) **Version 1 (6 pts)**
 - JSP (scriptlets accepted) + Java Beans + Servlet + JDBC
 - *.properties* file to store information about the database
 - SQL script in /WEB-INF
 - All the JSPs in /WEB-INF
 - DBMS : Java DB
 - b) **Version 2 (8 pts)**
 - Maven project
 - JSP (EL et JSTL only/ Please no Java code in your JSPs)
 - Java Beans
 - Servlet (optimized)
 - Persistence with JPA
 - DBMS : MySQL

c) Version 3 (6 pts)

Like V2 except for :

- Use **RESTful Web services**
- DBMS : A remote solution
- Code quality: use Sonarqube & JUnit

3) Bonus (+1 each)

- Deploy on a Cloud platform (OpenShift or AWS or..)
- Any exceptional surprise in terms of architecture, elegant design and

4) Notice: *You may use any IDE (NetBeans, Eclipse, IntelliJ IDEA, and so on..). Just indicate which IDE you've used in the readme.txt.*

EVALUATION CRITERIA

1. Compliance with the instructions above
2. Your autonomy
3. Your active participation in your group's work / Your presence during the project sessions
4. Quality of your code
